

Karas 2011

Census Regional Profile

2011 POPULATION AND HOUSING CENSUS

//Karas Regional Profile

Basic Analysis with Highlights

March 2014

Foreword

The first Population and Housing Census in an independent Namibia was conducted in 1991. Since then, a Census has been undertaken every ten years, and the 2011 Population and Housing Census marks Namibia's third census since independence in 1990. The Census is demonstrative of the Namibia Statistics Agency's (NSA) commitment to providing relevant and quality statistics to support decision making, policy formulation and monitoring of development programmes.

This regional profile presents the result of the 2011 Namibia Population and Housing Census for the //Karas Region. The report provides a wide range of indicators on population characteristics, household and housing conditions and households enumerated in the region between 28 August and 15 September 2011. The report further provides detailed information on age and sex composition, marital status, education, literacy, economic activity, orphan-hood, fertility and disability. In addition, household size, housing amenities, ownership and the quality of housing are also presented in this report. All these indicators are provided at regional, urban/rural and constituency level. It should be noted that internal migration was not possible to calculate at constituency level. However it was provided at regional level in the 2011 main census report launched on 27 March 2013, as well as in the Population Atlas released in June 2013.

This regional profile is the fourth in a series of reports to be released based on the 2011 census data. The first report - released in April 2012 - disseminated provisional results on the distribution of the population. The second report was the census main report, which presented more detailed results at national level; and the third report was the Population Atlas, which depicts the distribution of the country's population on maps by regions and constituencies.

We thank the Government of the Republic of Namibia for contributing significantly to the implementation of the 2011 census, as well as our development partners who provided technical or financial support. We are grateful to everyone who contributed to ensuring that the 2011 census was a success. In particular, we thank UNFPA, the Government of the United States of America through USAID and Statistics South Africa for their technical support to ensure the timely completion of census activities. We also thank the census inter-agency technical committee, line ministries, private institutions, the governor of the region and regional offices, field staff and the general public for their support, which was pivotal to the success of the 2011 Population & Housing Census.

We are hopeful that the users of this report will find its contents useful for their decision making and planning purposes, including business investments. Our commitment is to ensure that all statistics required by our users are readily available.

DR. JOHN STEYTLER

CHAPTER 1: INTRODUCTION

1.1 Background History

//Karas Region is the southern-most region of Namibia. This region is Namibia's largest region and it is bordered by South Africa in the South, the Atlantic Ocean in the West, the Hardap region in the North and with a section of Botswana and again South Africa to the East. The region's economy is attributed to its diamonds; it is home to the country's largest mining activities. The //Karas Region has 6 constituencies: Berseba, Karasburg, Keetmanshoop Rural, Keetmanshoop Urban, Luderitz and Oranjemund.

1.2 The 2011 Population and Housing Census

The 2011 Namibia Population and Housing Census results show that //Karas had a population of 77, 421 people of which 38, 014 were women and 39 407 were men, and this population was growing at an annual rate of 1.1 percent. Over half of the population lived in urban areas (54%) compared to only 46 percent in rural areas. This was due to a large proportion of migration from rural to urban areas, particularly among young adults, in search of job opportunities in towns. The region (?) was composed of 20, 988 households, with an average size of 3.6 persons per household.

Therefore, this Regional Report provides more detailed findings in terms of the socio-economic, demographic, household and housing characteristics of the //Karas Region than those collected during the 2011 Census. Furthermore, comparisons were made between the various Census years as well as among urban/rural areas and constituencies within the region.

1.3 Organization of the Report

The Report is comprised of seven main chapters and an Annex. Chapter 1 provides the background of the region, Chapter 2 presents information on the population size, structure and composition, as well as sex ratio and population density. Chapter 3 gives information on marital status, citizenship and registration of births; while information on population trends, with a focus on population growth, fertility and household deaths, were given in Chapter 4. Furthermore, Chapter 5 addresses socio-economic characteristics of the population and mainly covers Information Communication Technology (ICT), literacy, education, disability, orphan-hood and economic activity. Chapter 6 provides information on household characteristics including household size, household composition, main sources of income for the household, asset ownership, main language spoken at household level and agricultural activity. Chapter 7 presents information on housing characteristics focusing on the types of housing unit, tenure status, construction materials, water supply and sanitation, as well as sources of energy for the household.

Please note that:

1. Chapter two (2) presents information for all persons including those who were in prisons, hotels and night travellers. While chapters 3-7 present information obtained from all persons who were enumerated in households and institutions only.

2. Imputation using the hot-deck method was applied for 'Not stated' and 'Don't know' to only age and sex of each person.
3. There are three (3) Annexes: a Glossary of Census terms, an Enumeration area map and Detailed tables.

CHAPTER 2: POPULATION STRUCTURE, COMPOSITION AND DENSITY

This chapter provides information on the population size, structure, composition and density of //Karas Region. It also presents analyses of population trends between the 1991, 2001 and 2011 Census years.

Total Population of //Karas Region was 77,421

2.1 Population size and Density

Figure 2.1 illustrates population size by region, urban and rural areas for all Census years. It shows that the total population of //Karas increased from 61,162 in 1991, to 69,329 in 2001, and in 2011 the population size increased to 77, 421 people. This trend is also observed in urban areas, where the population has been increasing consistently over the Census years.

Figure 2.1 Population size by Census year and area

Population density is the average number of people per square kilometre. Thus, it shows the relationship between a given population and the size of the country. Population densities calculated for all constituencies are shown in Table 2.1 below.

At constituency level, Keetmanshoop Urban was the most densely populated among all constituencies, with a density of 37.1 persons per square kilometre. On the other hand, Keetmanshoop Rural was the least densely populated constituency with a density of 0.2 persons per square kilometre.

The population density of //Karas was 0.5 persons per square kilometres

Table 2.1 Population density by area

Area	Population	Area in km ²	Persons per km ²
//Karas	77 421	161394.8	0.5
Berseba	10 589	31724.8	0.3
Karasburg	16 470	38329.26	0.4
Keetmanshoop Rural	7 219	37922.49	0.2
Keetmanshoop Urban	19 447	524.3469	37.1
Luderitz	13 859	48270.81	0.3
Oranjemund	9 837	4623.138	2.1

Table 2.2 shows the proportion of the population living in rural and urban areas as well as in the six constituencies of //Karas Region.

The table shows that the proportion of the population living in urban areas was higher than in rural areas (54.0% and 46.0%, respectively in 2011). At constituency level, Keetmanshoop Urban constituency accommodated over 25 percent of the total population, or 19,447 persons - up from 22.8 percent 10 years ago. Only 9.3 percent of the population (7,219 persons) lived in the Keetmanshoop Rural constituency, which has not seen much of a change in its relative share over the past 10 years. It can be noted that the proportion of the population living in Luderitz has declined from 21.0 percent in 2001 to 17.9 percent in 2011.

Table 2.2 Percentage share of the population within the Census year and area

Area	Number		Percent	
	2001	2011	2001	2011
//Karas	69 329	77 421	100.0	100.0
Urban	37 599	41 823	54.2	54.0
Rural	31 730	35 598	45.8	46.0
Berseba	9 064	10 589	13.1	13.7
Karasburg	15 758	16 470	22.7	21.3
Keetmanshoop Rural	6 399	7 219	9.2	9.3
Keetmanshoop Urban	15 777	19 447	22.8	25.1
Lüderitz	14 542	13 859	21.0	17.9
Oranjemund	7 789	9 837	11.2	12.7

2.2 Population structure and composition

This sub-section provides information on the composition of the population in terms of gender and age, which are important demographic parameters.

2.2.1 Age groups

The age distribution of the population by broad age groups and area is presented in Table 2.3. The //Karas Region had a relatively young population with 30.5 percent of the whole population being less than 15 years of age. The share of young people below the age of 15 years in rural areas was 31.3 percent, while that of urban areas was 30 percent. The proportion of elderly

people (above the age of 60 years) in rural areas was 6.9 percent, while in urban areas it was 5.5 percent.

Table 2.3 Population distribution by age group and area

Area	Percent in age group			
	0 - 4	5 - 14	15 - 59	60+
//Karas	11.2	19.3	63.3	6.2
Urban	10.7	19.3	64.6	5.5
Rural	11.9	19.4	61.7	6.9
Berseba	12.1	22.7	53.4	11.8
Karasburg	11.8	17.6	64.5	6.0
Keetmanshoop Rural	11.6	22.5	57.9	8.0
Keetmanshoop Urban	11.1	19.6	62.6	6.7
Lüderitz	10.4	19.7	65.9	4.0
Oranjemund	10.8	15.1	73.1	1.0

2.2.2 Median age

The //Karas population had a median age of 26

Median age is used as an indicator to determine whether the population is young, intermediate or old. Thus, a country is considered 'young' when it has median age of less than 20 years, while regions with medians of 30 years and above are considered 'old'. Populations with median ages between 20 and 29 are referred to as intermediate. During the 2011 Census period, //Karas Region had a median age of 26 years, and is therefore 'intermediate'. The figure of 26 years means that half of the population is less than 26 years and the other half is older than 26 years.

Table 2.4 presents information on median age by sex, for urban and rural areas, and at the constituency level. The median age for urban areas was 26 years, slightly higher than the median age of 25 years in rural areas. Keetmanshoop Rural Constituency had a relatively young population with a median age of 23 years compared to other constituencies.

Table 2.4 Median age by sex and area

Area	Median age		
	Total	Female	Male
//Karas	26	25	26
Urban	26	26	26
Rural	25	24	26
Berseba	24	23	24
Karasburg	26	26	26
Keetmanshoop Rural	23	22	24
Keetmanshoop Urban	25	24	25
Lüderitz	27	27	27
Oranjemund	28	25	30

More than 50% of the population was male

2.2.3 Sex composition

The 2011 Census collected information on sex. Table 2.5 gives the population distribution by sex, urban and rural areas, and constituencies.

The results show that males made up slightly more than half of the population (50.9%), compared to 49.1 percent for females. More males were found in rural areas than in urban areas. Karasburg and Keetmanshoop Urban constituencies, where the proportions of females were 51 and 51.3 percent respectively, were characterised by a greater dominance of females compared to the regional average. The table further shows that the Oranjemund constituency had the largest proportion of males, with the male population standing at 54.7 percent.

Table 2.5 Population distribution by sex and area

Area	Total	Female	Percent	Male	Percent
//Karas	77 421	38 014	49.1	39 407	50.9
Urban	41 823	21 029	50.3	20 794	49.7
Rural	35 598	16 985	47.7	18 613	52.3
Berseba	10 589	4 932	46.6	5 657	53.4
Karasburg	16 470	8 402	51.0	8 068	49.0
Keetmanshoop Rural	7 219	3 363	46.6	3 856	53.4
Keetmanshoop Urban	19 447	9 970	51.3	9 477	48.7
Lüderitz	13 859	6 887	49.7	6 972	50.3
Oranjemund	9 837	4 460	45.3	5 377	54.7

2.2.4 Sex ratio

On average there were 104 males for every 100 females in the Karas Region

Sex ratio is another measure of sex composition and is the proportion of males per 100 females in a given population.

Table 2.6 shows the sex ratio by urban and rural areas and by constituencies. In 2011 the sex ratio for //Karas Region was 104, which implies that on average, there were more males for every 100 females in this region. More males were found in rural areas (110 males for every 100 females) in 2011. This decline in the sex ratio of urban areas may be indicative of migration behavior, as more and more females have also migrated to towns during the last 10 years.

Table 2.6 Sex ratio by Census years and area

Area	Census year	
	2001	2011
//Karas	114	104

Urban	108	99
Rural	123	110
Berseba	110	115
Karasburg	107	96
Keetmanshoop Rural	105	115
Keetmanshoop Urban	92	95
Lüderitz	130	101
Oranjemund	181	121

2.2.5 Age-sex pyramid

The age-sex pyramid provides an important illustration of the demographic characteristics of the population.

Figure 2.2 illustrates the //Karas Region's population age-sex pyramid, which shows that //Karas had a youthful population with a broad base of young people and a very narrow apex with fewer older people. However, it is important to note that the largest proportion of the //Karas Region's population was of working age, hence the pyramid indicates more people of the middle age, that is, between the age groups 20-24 to 35-39. In addition, this shape is a typical reflection of populations experiencing high fertility.

Figure 2.2 Population pyramid, //Karas region

Figure 2.3 presents the population pyramid for urban areas in five-year age groups. The pyramid is bulky in the middle and has a relatively broader base indicating that urban areas have a large proportion of working-age people (between 15-59 years of age) and a large proportion of younger people. The pyramid has a narrow apex indicating that urban areas have a much smaller proportion of elderly people .

Figure 2.3 Population pyramid, //Karas Urban

Figure 2.4 gives the pyramid for rural areas. The pyramid shows a broad base (an indication of high fertility) and a narrow apex. However a shrink is observed in both sexes of ages 15 to 49 in the rural areas, compared to urban areas. This is an indication that migration away from the rural areas to other regions has affected the rural population.

Figure 2.4 Population pyramid, //Karas Rural

CHAPTER 3: POPULATION CHARACTERISTICS

This chapter presents information on demographic characteristics and focuses on marital status, citizenship and status of birth registration.

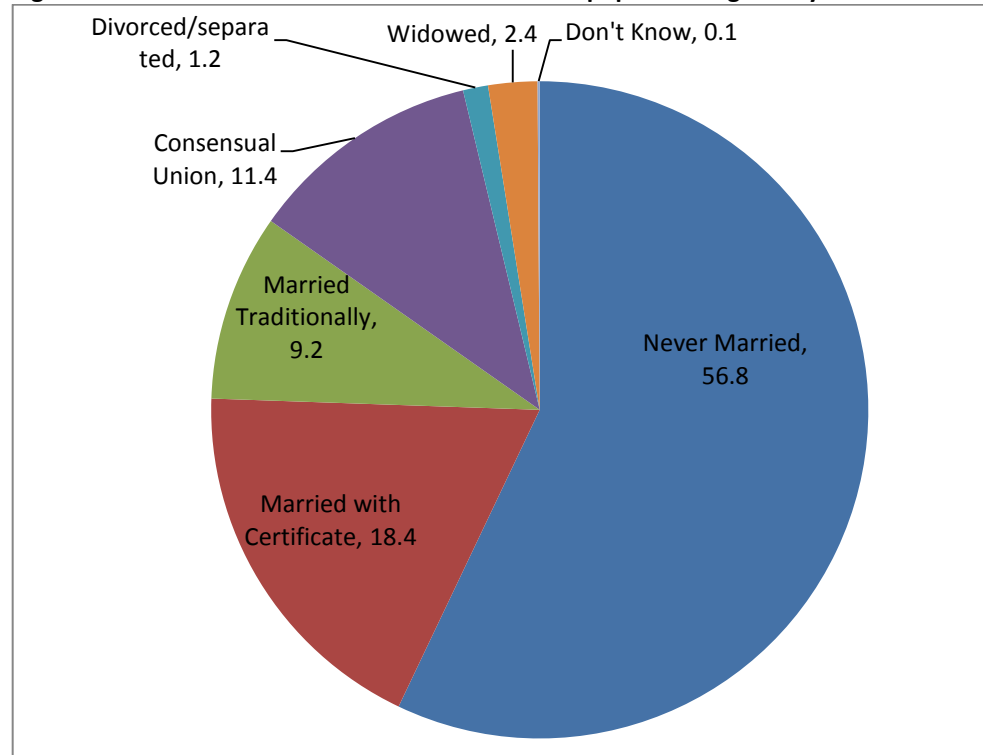

3.1 Marital status

About 27% of the //Karas Region's population aged 15 years and above were married.

During the Census, all people were asked to state their marital status in one of the following categories: never married, married with certificate, married traditionally, consensual union, divorced/separated and widowed. For international comparisons the analysis focuses only on the population aged 15 years and above, although we acknowledge that there are cases of child marriage in Namibia.

Figure 3.1 shows that about 56.8 percent of population of the population aged 15 years or above in //Karas Region was never married, while about 27 percent was married at the time of the Cesus. The results also indicate that 11.4 percent of the population lived in a consensual union. The high percentage of the population that has never been married can be explained by the young population.

Figure 3.1 Percent distribution of marital status for population aged 15 years and above

3.2 Citizenship

The census asked all people to state their country of citizenship, from which the numbers of Namibians and non-Namibians were reported.

Table 3.1 shows that the great majority of people enumerated (98.1%) in the 2011 Census were Namibians.

Table 3.1 Population distribution by citizenship and sex

Citizenship	Population					
	Total	Percent	Female	Percent	Male	Percent
Total	76 388	100.0	37 641	100.0	38 747	100.0
Namibians	74 904	98.1	36 896	98.0	38 008	98.1
Non-Namibians	1 484	1.9	745	2.0	739	1.9

Table 3.2 shows the distribution of non-Namibians by selected countries of origin; however, it only lists countries of origin from which citizens constitute a substantial share of the total non-Namibian population.

South African nationals represented the highest proportion of foreigners residing in //Karas Region, at 38.1 percent. This is a drop from the 58.5 percent in 2001. Only 0.9 percent of the non-Namibian nationals were from Zambia.

Table 3.2 Non- citizen's population by sex and country of origin

Citizenship	Population					
	Total	Percent	Female	Percent	Male	Percent
Total	1 809	100.0	872	100.0	937	100.0
Angola	27	1.5	8	0.9	19	2

American countries	23	1.3	13	1.5	10	1.1
Asian And Oceanic Countries	81	4.5	37	4.2	44	4.7

3.3 Namibian Birth Registration

The Census provides information on whether the respondent was in possession of a Namibian birth registration certificate or not. Birth certificates are needed to access social services such as social grants and educational services.

Table 3.3 below shows that 97.8 percent of the population possessed Namibian birth certificates. At constituency level, the highest proportion of people with birth certificates was in Keetmanshoop Urban (98.3%), while the lowest was in Keetmanshoop Rural constituency, with 96.9 percent.

Table 3.3 Namibian birth certificate status by area

Area	Total	With birth certificate		Without birth certificate		Don't Know	
		Number	Percent	Number	Percent	Number	Percent
//Karas	74 904	73 291	97.8	1 516	2.0	97	0.1
Urban	40 291	39 537	98.1	698	1.7	56	0.1
Rural	34 613	33 754	97.5	818	2.4	41	0.1
Berseba	10 387	10 158	97.8	216	2.1	13	0.1
Karasburg	16 026	15 687	97.9	324	2.0	15	0.1

Keetmanshoop Urban	18 675	18 350	98.3	290	1.6	35	0.2
Lüderitz	13 350	13 081	98.0	255	1.9	14	0.1
Oranjemund	9 400	9 168	97.5	218	2.3	14	0.1

97.8% of the population had acquired birth certificates

CHAPTER 4: POPULATION TRENDS

This chapter analyses population trends, including changes in population growth, sex ratios, household deaths and fertility.

The annual population growth rate in the //Karas Region between 2001 and 2011 was

4.1 Population growth

The population of //Karas Region has been growing slowly since the 2001 Census. Table 4.1 provides population increase and annual growth rates between 2001 and 2011.

The annual population growth rate for //Karas Region between 2001 and 2011 was 1.1 percent. Furthermore, the annual growth rate for urban areas was 1.1 percent, which is slightly lower than that of rural areas. At constituency level, between the period of 2001 – 2011, Oranjemund recorded the highest growth rate (2.3%), while Luderitz recorded a negative growth rate of minus 0.5 percent.

Table 4.1 Population change and annual growth rates for 2001-2011 by area

Area	Number		Population increase (2001-2011)	Annual growth rate (2001-2011)
	2001	2011		
//Karas	69 329	77 421	8 092	1.1
Urban	37 599	41 823	4 224	1.1
Rural	31 730	35 598	3 868	1.2
Berseba	9 064	10 589	1 525	1.6
Karasburg	15 758	16 470	712	0.4
Keetmanshoop Rural	6 399	7 219	820	1.2
Keetmanshoop Urban	15 777	19 447	3 670	2.1
Lüderitz	14 542	13 859	-683	-0.5
Oranjemund	7 789	9 837	2 048	2.3

4.2 Fertility

The Census collected information on live births from all women aged 12 - 64 years. Generally, fertility indicators measure the frequency of child bearing in a given population. This section presents two indicators of fertility, namely: (i) Crude Birth Rate (CBR) and (ii) Age at first birth for women aged 12 – 49 years, irrespective of their marital status.

Unadjusted crude birth rate was estimated at 26.5 births per 1,000 people

4.2.1 Crude Birth Rate

The Crude Birth Rate (CBR) is the number of live births per 1,000 of the total female and male population per year. For the 2011 Census, there were 2,054 children born in the //Karas Region during the 12-months prior to the Census date, which gives the reported or unadjusted CBR of 26.5 births per 1,000 people.

Table 4.2 below indicates that the Crude Birth rate was slightly higher in rural areas (26.9) compared to urban areas (26.2). At constituency level, Karasburg had the highest CBR of 30.1 births per 1,000 people, while Berseba had the lowest CBR of 24.2 births per 1,000 people.

Table 4.2 Crude Birth Rates by area

Area	Population	Births last 12 months	CBR
//Karas	77 421	2 054	26.5
Urban	41 823	1 096	26.2
Rural	35 598	958	26.9
Berseba	10 589	256	24.2
Karasburg	16 470	495	30.1
Keetmanshoop Rural	7 219	178	24.7
Keetmanshoop Urban	19 447	505	26.0
Lüderitz	13 859	362	26.1
Oranjemund	9 837	258	26.2

4.2.2 Age at First Birth

Age at first birth influences the total number of births that a woman might have in her life, which has an impact on the size, composition, and future growth of the population.

Table 4.3 shows that the average age of mothers at first birth in //Karas region was 21 years. In rural areas, the average age of mothers at first birth (20.8 years) was slightly lower than in urban areas (21.5 years). There were also slight variations between constituencies. Mothers in most constituencies gave birth for the first time at an early age of 21 years, with the exception of those in Oranjemund and Luderitz, who on average delayed giving birth until age of 22 years.

Table 4.3 Average age of mother at first birth by area

Area	Average age at first birth
//Karas	21.2
Urban	21.5
Rural	20.8
Berseba	21.2
Karasburg	20.6
Keetmanshoop Rural	20.7
Keetmanshoop Urban	21.3
Lüderitz	21.6
Oranjemund	21.8

4.3 Deaths in the household

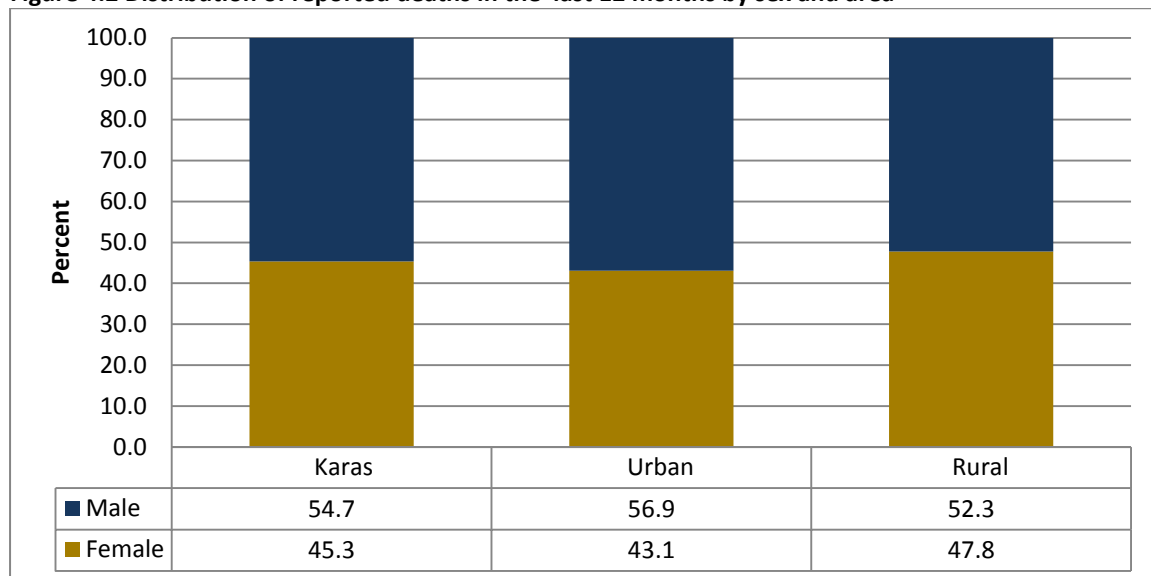

Information on deaths in the last 12 months (September 2010 to August 2011) was collected from all households during the Census. Usually, mortality indicators are based on data from civil registration, but in Namibia this coverage is incomplete. However, it must also be acknowledged that information from surveys and Censuses may be under-reported, which can lead to underestimations of the level of mortality.

825 deaths were reported in the //Karas Region for the 12 months prior to the census

4.3.1 Reported Deaths

Figure 4.2 shows the number of reported deaths in the last twelve months by sex, urban and rural areas. A higher proportion of all deaths were recorded for males (54.7%) compared to females (45.3%) in the region, and at the urban and rural levels.

Figure 4.2 Distribution of reported deaths in the last 12 months by sex and area

The crude death rate was 10.7 deaths per 1,000 persons

4.3.2 Crude Death Rate

Crude Death Rate (CDR) is defined as the number of deaths that occurred in a given calendar year per 1,000 people in the population.

Table 4.4 shows that in //Karas Region, a total of 825 deaths occurred during the 12 months prior to the Census, which gives a CDR of 10.7 deaths per 1000 people. The results show that there was a slight difference in the number of deaths reported in urban areas (10.2 deaths per 1000 people) compared to those reported in rural areas (11.2 deaths per 1000 people). The highest death rates were reported in Berseba (19.1 deaths per 1000 people), Keetmanshoop Urban (12.6 CDR), Keetmanshoop Rural (12.3 CDR) and Karasburg (11.1 CDR), whereas lower death rates were reported in Oranjemund and Luderitz with CDRs of 3.4 and 5.3, respectively.

Table 4.4 Number of reported deaths in the last 12 months and CDR by area

Area	Population	Total deaths	CDR
//Karas	77 421	825	10.7
Urban	41 823	425	10.2
Rural	35 598	400	11.2
Berseba	10 589	202	19.1
Karasburg	16 470	182	11.1
Keetmanshoop Rural	7 219	89	12.3
Keetmanshoop Urban	19 447	245	12.6
Lüderitz	13 859	74	5.3
Oranjemund	9 837	33	3.4

4.3.3 Death Registration

Table 4.5 shows that 97.2 percent of all reported deaths in the 12 months prior to the 2011 Census were registered. Rates of registration were higher in urban areas (97.6%) than in rural areas (96.8%). At constituency level, more than 95 percent of deaths were registered in almost all of the constituencies, apart from Luderitz (94.6 %) and Oranjemund, which had the lowest percentage of registered deaths (91%).

Table 4.5 Death registration status by area

Area	Number of reported deaths	Total registered deaths	Percent registered
//Karas	825	802	97.2
Urban	425	415	97.6
Rural	400	387	96.8
Berseba	202	199	98.5
Karasburg	182	176	96.7
Keetmanshoop Rural	89	88	98.9
Keetmanshoop Urban	245	239	97.6
Lüderitz	74	70	94.6
Oranjemund	33	30	90.9

CHAPTER 5: SOCIO-ECONOMICS CHARACTERISTICS OF THE POPULATION

This chapter deals with the socio-economic characteristics of the population. The information discussed in this chapter is crucial for decision-making and for the planning and monitoring of development programmes and policies. The sub-topics discussed include: Information Communication Technology (ICT), Early Childhood Development (ECD), Education and Literacy, Disability and Labour Force.

74 percent of the //Karas Region’s population had access to a radio

5.1 Information and Communication Technology (ICT)

Information on the usage or access to ICT facilities was collected from people aged three years and above. The information included access to information and communication technology such as radio, television, computer, cell phone, telephone (fixed line), newspaper (daily/weekly) and internet (daily/weekly).

Figure 5.1 shows that the majority (74.0%) of the population aged 3 years and older in //Karas Region had access to radio, with greater access in urban (80.2%) than rural (66.8%) areas. Cell phones (63.8%) are much more widespread across the region than fixed line telephones (12.7%). However, access to other modern information and communication technology such as computers and internet is fairly limited, particularly in rural areas.

Figure 5.1 Population aged 3 years and above who have access to ICT by type of service or use and area

16.9 percent of children aged 0-4 years were attending Early Childhood Development programmes

5.2 Early Childhood Development (ECD)

Respondents were asked to state whether children aged 0-4 years attended any type of Early Childhood Development (ECD) services, such as Edu-care (day-care, crèche, kindergarten) and pre-primary school.

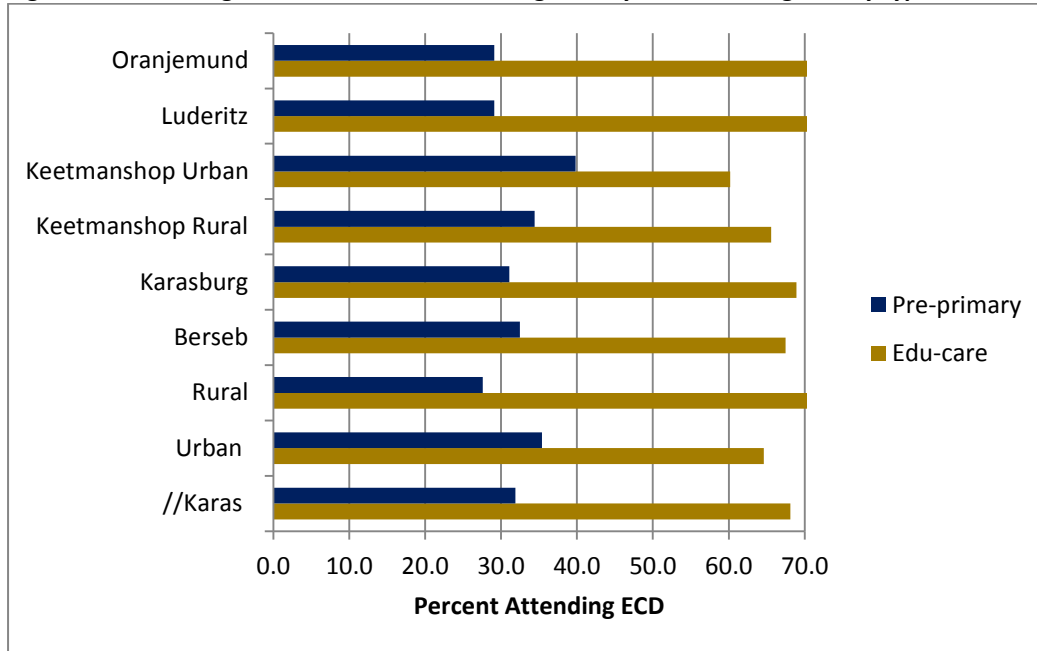

Table 5.1 shows a total population of 8,679 children aged 0-4 years in 2011; and out of this number about 16.9 percent were attending ECD programmes. However, access in urban areas was much better, with 18.2 percent attending ECD; while attendance in rural areas was 15.5 percent. Slightly more girls than boys were enrolled in ECD programmes in both rural and urban areas.

At a constituency level, a much higher proportion of children attended ECD programmes in Lüderitz (32.1%) and Oranjemund (24.6%). Keetmanshoop Rural had the least proportion (7.3%) of children attending ECD .

Table 5.1 Population aged 0-4 years attending ECD by sex, and area

Area	Population aged 0 - 4 years			Attending ECD			Percent attending		
	Total	Female	Male	Total	Female	Male	Total	Female	Male
//Karas	8 679	4 403	4 276	1 463	753	710	16.9	17.1	16.6
Urban	4 437	2 232	2 205	807	405	402	18.2	18.1	18.2
Rural	4 242	2 171	2 071	656	348	308	15.5	16	14.9
Berseba	1 276	645	631	154	81	73	12.1	12.6	11.6
Karasburg	1 935	972	963	270	128	142	14	13.2	14.7
Keetmanshoop Rural	833	411	422	61	30	31	7.3	7.3	7.3
Keetmanshoop Urban	2 136	1 086	1 050	256	127	129	12	11.7	12.3
Lüderitz	1 438	725	713	461	245	216	32.1	33.8	30.3
Oranjemund	1 061	564	497	261	142	119	24.6	25.2	23.9

Figure 5.2 shows the percent distribution of children aged 0-4 years attending ECD by type. Attendance in Edu-care programmes was higher (68.1%) than in pre-primary school (31.9%), and this can be observed at the urban, rural and constituency levels.

Figure 5.2 Percentage distribution of children aged 0-4 years attending ECD by type and area

5.3 Education and Literacy

Information on literacy and education is vital for many purposes, including the need for Government to articulate and monitor national development programs and goals. During the Census, specific information on education and literacy was collected from all people aged 5 years and above.

About 96.6 percent of population over 15 years was literate at the time of the Census

5.3.1 Literacy

Literacy can be defined as the ability to read and write with understanding in any language. Therefore, all people aged 5 years and above were asked whether they can read and write in any language with understanding, but no test was administered to determine the level of literacy.

Table 5.2 presents information on literacy rates for the population aged 15 years and above. This table shows that the regional adult literacy rate was 96.6 percent with no major difference between males and females. The adult literacy rate in urban areas stood at 98.0 percent compared to 94.9 percent in rural areas. Furthermore, the table shows that adult literacy was highest in Oranjemund (99.5%) and lowest in Berseba (90.2%).

Table 5.2 Literate adult population aged 15 years and above by sex and area

Area	Population age 15 years and above			Literate			Literacy rate		
	Total	Female	Male	Total	Female	Male	Total	Female	Male
//Karas	52 808	25 750	27 058	51 005	24 906	26 099	96.6	96.7	96.5
Urban	28 621	14 420	14 201	28 046	14 109	13 937	98.0	97.8	98.1
Rural	24 187	11 330	12 857	22 959	10 797	12 162	94.9	95.3	94.6
Berseba	6 830	3 121	3 709	6 159	2 830	3 329	90.2	90.7	89.8
Karasburg	11 502	5 917	5 585	11 193	5 763	5 430	97.3	97.4	97.2
Keetmanshoop Rural	4 728	2 139	2 589	4 426	2 022	2 404	93.6	94.5	92.9
Keetmanshoop Urban	13 060	6 739	6 321	12 725	6 551	6 174	97.4	97.2	97.7
Lüderitz	9 450	4 711	4 739	9 302	4 639	4 663	98.4	98.5	98.4
Oranjemund	7 238	3 123	4 115	7 200	3 101	4 099	99.5	99.3	99.6

Table 5.3 indicates that the literacy rate for youth (15-24 years) in //Karas Region was 98.7 percent, with a higher proportion of females (99%) than males (98.4%) being literate. The rate was also higher in urban (99.3%) than in rural areas(98.0%).

The literacy rate for young women in rural areas was 1.3 percentage points higher than men, while in urban areas the literacy rates differed by only 0.3 percent. There were slight differences across constituencies where Oranjemund had the highest rate of 99.4 percent and Berseba had the lowest literacy rate of 97.0 percent.

Close to 99% of the youth aged 15 to 24 years were literate

Table 5.3 Literate youth population aged 15-24 years by sex and area

Area	Population aged 15 - 24 year			Literate			Literacy rate		
	Total	Female	Male	Total	Female	Male	Total	Female	Male

Oranjemund	1 629	845	784	1 620	839	781	99.4	99.3	99.6

5 percent of the population 6 years and above in //Karas areas have never been to school.

5.3.2 Formal Education

Formal education can be defined as full-time attendance at any regular educational institution, public or private, for systematic instruction.

The categories of formal education used during the census were: pre-primary schools, primary schools, secondary or high schools, technical schools, agricultural institutions, teacher training colleges, polytechnics and universities.

5.3.2.1 School Attendance

Table 5.4 shows that the majority of the people in //Karas had left school (67.9%), and that 24.1 percent of the population aged 6 years and above was attending school. In the entire region only a small proportion (5.0%) said they never attended school; this amounted to 7.2 percent in rural areas and 3.2 percent in urban areas.

Table 5.4 Percent distribution of school attendance for population aged 6 years and above by area

Area	Population 6 years and above	Never Attended	Pre-primary	Adult Education Programme			
				Attending School	Left School	Don't know	
//Karas	66 000	5.0	1.0	24.1	67.9	1.7

About 54 % of persons aged 15 years and above completed primary education before

5.3.2.2 Educational Attainment

Table 5.5 shows that 53.9 percent of the //Karas Region's population completed their primary education and 22.9 percent completed secondary school. 19.4 percent of respondents either had no formal education or had left school without completing primary education. Only about 4 percent of the region's population aged 15 and above had completed a tertiary education.

Table 5.5 Distribution of the population aged 15 years and above who left school by highest level of educational attainment and sex

Over 80% of children aged 7 to 15 years were enrolled in school

5.3.2.3 School Enrolment

Figure 5.4 presents school enrolment for the school-going population aged 5 to 24 years, by sex. Enrolment rates were highest for the age group 7 to 15 years, exceeding 80 percent. However, enrolment rates dropped after the age of 17 years. More females than males were enrolled in school until the age 16 years.

Figure 5.4 School enrolment for population 5-24 years by sex

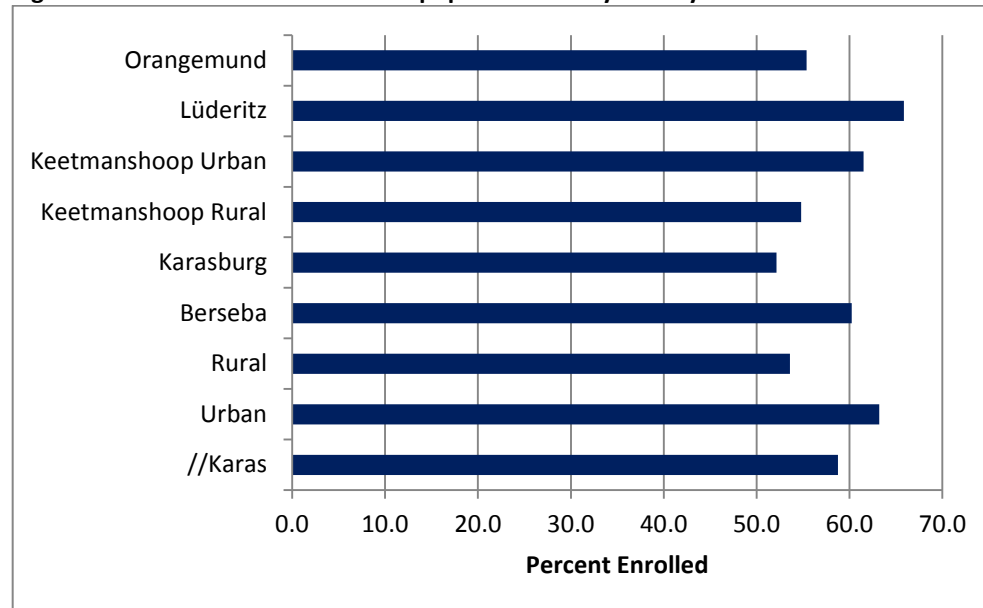

Table 5.6 presents school enrolment rates for urban and rural areas. The table shows that that the enrolment rates were much higher in urban areas (63.2%) than in rural areas (53.6%).

Table 5.6 School enrolment for population 5-24 years by area

Figure 5.5 presents the school enrolment rate for the population aged 5 to 24 years by area. The results show that school enrolment was higher in urban areas (63.2%) than in rural areas (53.6%). At the constituency level, Luderitz had the highest enrolment rate of 65.8 percent and Karasburg had the lowest enrolment, which was just over 50.0 percent.

Figure 5.5 School enrolment rate for population 5-24 years by area

Close to 92% of children aged 7 – 13 in the //Karas Region were enrolled in primary school

Primary school enrolment rate is presented in table 5.7. The results show that overall, the enrolment rate for the region was 91.6 percent for children aged 7 to 13 years old. The enrolment rate was higher in urban areas (93.6%) than in rural areas (89.3%). The results further show that more girls than boys in this age group were enrolled in school. At constituency level, the highest enrolment rate of 93.7 percent was in Luderitz constituency.

Table 5.7 Primary school enrolment for population aged 7-13 years by sex and area

5.4 Disability

Disability is defined as a long-term physical, psychological or mental condition that limits a person from carrying out everyday activities at home, work or school. It may be present from birth or develop during a person's lifetime. Information on disability assists Government in planning infrastructure, education systems and community awareness programmes, for example.

During the Census, all people in private households and institutions were asked about types of long-term permanent disability or limitation. Ten types of disability were identified for this purpose: blindness, visual impairment, deafness, hearing difficulties, muteness/dumbness, speech impairment, physical impairment of lower and upper limbs, mental disability, albinism and autism.

Table 5.8 indicates that during the Census period 3.5 percent of the total //Karas Region population lived with disabilities. The proportion of people living with disabilities was slightly higher in rural (3.7%) than in urban areas (3.3%). Constituency figures show that Berseba and Keetmanshoop Urban had the highest proportion of disabled people, with 6.0 percent and 4.3 percent respectively, while, Oranjemund had the lowest proportion of disabled people at 2.0 percent.

Table 5.8 Population with disability by sex and area

Area	Population			With disability			Percent		
	Total	Female	Male	Total	Female	Male	Total	Female	Male
//Karas	76 388	37 641	38 747	2 649	1 240	1 409	3.5	3.3	3.6

*Note: * The total is the number of persons with a disability. This is not the total in the column as some persons have multiple disabilities*

Table 5.10 shows that in urban and rural areas, the highest proportion of people with disabilities were those with impairment of lower limbs at 24.2 and 25.3 percent respectively. The disabilities affecting the smallest proportion of people were albinism and autism, each of which was reported by less than 1 percent of people with disabilities.

Table 5.10 Percent distribution of people with disabilities by type and area

Disability type	Number			Percent

*Note: * The total is the number of persons with a disability. This is not the total in the column as some persons have multiple disabilities*

Table 5.11 shows that about 34.4 percent of people with disabilities also have difficulty engaging in any learning and/or economic activity. There was a significant difference between males (36.8%) and females (31.8%) in this respect. In addition, a higher proportion of people with difficulties in engaging in any learning and/or economic activity was observed in rural areas (37.2%) compared to urban areas (31.7%). The Berseba constituency had the highest percentage of people with disabilities who faced difficulties engaging in any learning and/or economic activity.

Table 5.11 Disabled population with difficulties to engage in any learning and/or economic activity by sex and area

5.5 Orphanhood

The 2011 Census defines orphanhood as a condition of being less than 18 years of age and without one or both parents. Information on orphans was collected from all members of the household.

Table 5.13 shows that 9.9 percent of the population 18 years and below in //Karas Region had lost one parent, while 2.1 percent had no parents. Orphanhood was more prevalent in urban than in rural areas. The proportion of the population 18 years and younger with a single parent in urban areas was 10.0 percent, only 0.1 percent higher than the 9.9 percent in rural areas.

At constituency level, the highest levels of orphanhood were in Berseba, where 11.4 percent of the population aged 18 and younger had lost at least one one parent.

Close to 10% of all children had lost one parent

Table 5.13 Percentage distribution of orphaned population 18 years and below by area

Area	Population aged 18 years and below	With one parent dead		With both parents dead	
		Number	Percent	Number	Percent
//Karas	28 921	2 868	9.9	599	2.1

75.4% of the //Karas Region's population aged 15 years and above were economically active

5.6 Economic Activity

During the Census enumeration, all people aged 8 years and above were asked about their economic activity within the seven days prior to the Census reference night. The analyses presented below, however, focus only on the population aged 15 years and above. Unlike the labour force survey which gives detailed information on specific activities, the Census only provides an overview of employment and economic activity.

The diagram in Figure 5.6 illustrates the composition and definition of the economically active and inactive population. Economically inactive people are students, homemakers and income recipients, while the economically active population is divided into the unemployed and employed population. The diagram shows that 75.4 percent of the population aged 15 years of age and above were economically active, 18.8 percent were economically inactive and information for 5.8 percent of the population was not available.

Figure 5.6 Population aged 15 years and above by activity status

5.6.1 Economically Active Population

Table 5.14 shows that 67.8 percent of the economically active population aged 15 years and above was employed, while 32.2 percent was unemployed. There were only slight differences between urban and rural areas whereby 67.4 percent of the population in urban areas was employed compared to 68.2 percent in rural areas.

Table 5.14 Employment status of economically active population aged 15 years and above by sex and area

5.6.2 Labour Force

The labour force participation rate is the proportion of the economically active population in a given population group, which is calculated as the number of economically active population divided by the total population in the same population group.

Table 5.15 shows that the labour force participation rate for the //Karas Region was 75.4 percent. The rate was higher for males (79.6%) than for females (70.9%). There was no difference on the Labour force participation rate in rural and urban areas (75.4% each).

At constituency level, labour force participation rates were high in Oranjemund (87.7%) and very low in Berseba constituency (61.2%). The labour force participation rate for females was lower in all the constituencies.

Table 5.15 Labour Force Participation rate for population aged 15 years and above by sex and area

Area	Population			In labour force			Labour Force Participation Rate		
	Total	Female	Male	Total	Female	Male	Total	Female	Male
//Karas	52 808	25 750	27 058	39 817	18 268	21 549	75.4	70.9	79.6

5.6.3 Employment by Main Occupation

Elementary occupations made up the largest occupation group with 25.7%

Table 5.16 shows that elementary occupations made up the largest occupation group (25.7%), followed by skilled agricultural/fishery workers (20.0%), service workers (13.0%) and craft and related trades workers (12.4%). There were differences observed between females and males among the top three occupational groups. Elementary occupations were dominated by females (33.1%) compared to males (20.8%). On other hand, more males worked as skilled agricultural/fishery and craft and related trade workers compared to females.

Table 5.16 Main occupation of employed population aged 15 years and above by sex

5.6.4 Employment by Industry

Table 5.17 shows the employed population by main industry and sex for //Karas Region. The results show that 'Agriculture, Forestry and Fishing' was the main industry (32.4%) of the work force, followed by 'Mining and Quarrying' (8.9%). Wholesale and Retail Trade as well as construction companies each employed about 6 percent of the workforce.

Education, Financial Insurance activities and accommodation and food serving activities were clearly the domain of women, while men predominately work in mining, construction and transport businesses.

5.6.5 Employment by Educational Attainment

Table 5.18 shows that about 41 percent of the employed population in the region had completed their primary education. Furthermore, it is shown that 27 percent of the employed population had completed their secondary education and about 20 percent of employed population had not completed primary school. Women were better educated than men, on average, with about 29 percent of employed women having completed secondary education and about 6 percent having completed tertiary education, compared to about 26 percent and 5 percent of men respectively.

5.6.6 Main Job Undertaken

The results in table 5.19 show that the private sector provided jobs for the largest proportion of employees (49.9%) in the //Karas Region. The lowest proportion of the employed population was work classified as 'Unpaid Family Worker (Subsistence/Communal)', at 0.3 percent. There were more men than women employed in work classified as 'Parastatal' and 'Commercial Farms', while work classified as 'Employee (Private)' was dominated by women.

Table 5.19 Main job of employed population aged 15 years and above by sex

5.6.7 Unemployment

The unemployment rate is the proportion of unemployed population in the labour force for a given population group (i.e. the number of unemployed population divided by the population in the labour force in the same population group).

Figure 5.7 shows the distribution of unemployed population in terms of their level of educational attainment. The results show that about 23.9 percent of the unemployed population had not completed primary education, 17.5 percent had completed secondary education and 0.8 percent had completed tertiary education. Those with no formal education constituted 5.2 percent of all the unemployed population.

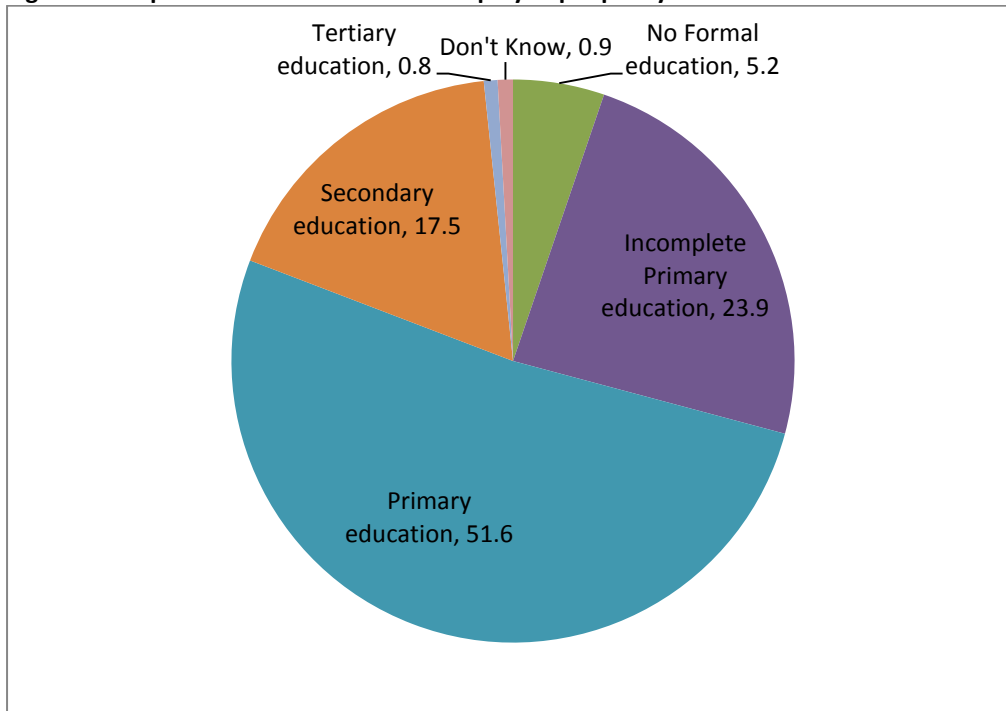

Figure 5.7 Population distribution of unemployed people by educational attainment

Table 5.20 shows that close to 26 percent of the unemployed population were actively looking for work. The proportion of females (32.3%) actively looking for work was significantly higher than the proportion of males (20.6%) actively seeking work. It can be observed that the percentage of job seekers in urban areas was lower than in rural areas (25.3% and 26.7% respectively).

The results also indicate that a higher proportion of unemployed females than males in all constituencies were actively looking for work. However, the highest proportion of job seekers of both sexes was in Berseba constituency (37.9%).

Table 5.20 Unemployed population rate for population aged 15 years and above, actively looking for a job by sex and area

Area	In Labour Force			Unemployed and looking for a job			Percent

5.7 Economically Inactive Population

Table 5.21 provides information on the economically inactive population of //Karas Region. Students constituted the largest share (39.3%), while income recipients had the lowest share with 1.5 percent. Women dominated the categories of 'Homemaker' and 'Old Age Pensioner' (24.2% and 29.9% respectively), while the proportion of economically inactive men in these categories was much lower (2.0% and 27.7% respectively). The proportion of economically inactive men was much higher in the categories of student and old age pensioner (46.4% and 27.7% respectively).

Table 5.21 Economically inactive population aged 15 years and above by activity status and sex

CHAPTER 6: HOUSEHOLD CHARACTERISTICS

This chapter presents information on household characteristics, particularly on household sizes, composition and income. Information on household assets, main languages spoken and agricultural activities is also outlined.

A household is defined as a group of people - related or unrelated - who live in the same dwelling unit and share or have common catering arrangements.

The average household size was 3.6 persons per household.

6.1 Household size

Table 6.1 shows that in 2011 a household in //Karas Region consisted of 3.6 persons on average, which declined from 4.1 persons in 2001. The average household size was slightly higher in rural areas (3.6 persons) than in urban areas (3.5 persons). Households in Keetmanshoop Urban were large, although they had dropped from an average of 4.6 in 2001 to 4.2 persons in 2011.

Table 6.1 Average household size by Census year and area

Area	2001	2011
//Karas	4.1	3.6

Oranjemund	3.8	2.7

6.2 Household composition

The composition of households refers to the relationship of its members to the head of the household. Several categories of relationships were used to categorize household members, including spouse, son/daughter, grandchild, etc. Table 6.2 gives the distribution of the household population by relationship to the head of the household.

Sons and daughters of the head accounted for about 25.9 percent of all relationships, while grandchildren (8.9%) and other relatives (19.6%) made up other significant proportions of household membership. Only 9.3 percent of household members were spouses.

Table 6.2 Household population by sex and relationship to the head of household

Relationship to head	Population			Percent

*Note: *This table refers only to Conventional/Private Households*

6.2.1 Sex of Household Head

Table 6.3 shows that the majority of households (62.9%) are headed by a male. There were huge differences between urban and rural households, where 67.4 percent rural households were male-headed compared to 59.2 percent in urban areas. Male-headed households were predominant in all constituencies of //Karas Region.

Table 6.3 Percent distribution of household head by sex and area

Area	Households	Number		Percent	
		Female	Male	Female	Male
//Karas	20 988	7 779	13 209	37.1	62.9

Oranjemund	3 381	1 017	2 364	30.1	69.9

6.2.2 Households Headed by Children and Orphans

Households headed by children and orphans require the attention of Government and other stakeholders. Table 6.4 provides information on households which were headed by children and orphans aged 18 years or younger. At the regional level 1.1 percent of the households in //Karas Region were headed by children while 0.4 percent were headed by orphans. There were slight differences between child-headed households in urban (1.0%) and rural areas (1.1%). Berseba constituency had the highest percentages of households headed by children (1.4%) and orphans (0.6%).

Table 6.4 Percent Distribution of Child and Orphan headed households by area

Area	Households	Percent	
		Child headed	Orphan headed
//Karas	20 988	1.1	0.4
Urban	11 347	1.0	0.4
Rural	9 641	1.1	0.4

Lüderitz	4 362	1.0	0.4
Oranjemund	3 381	0.9	0.2

6.3 Household Income

Households were asked to state their main source of income, which included: farming, business activities (non-farming), wages and salaries, old age pension, cash remittances, retirement fund, grants for orphans and grants for people living with disabilities.

Table 6.5 shows that wages and salaries (71.6%) was the highest main source of income in //Karas Region, while the lowest source was the orphan grant, which was recorded in 0.4 percent of all households. Both urban and rural areas reported wages and salaries as the highest main source of income at 76.5 and 65.9 percent respectively, of all the households. This trend was also observed in all constituencies of the region.

Table 6.5 Percentage distribution of households main source of income by area

Area	Households	Business Activity-None								
		Farming	Farming	Wages and Salaries	Old-Age Pension	Cash Remittances	Retirement Fund	Orphan's Grant	Disability Grant	Others

Oranjemund	3 381	0.3	5.4	87.1	0.6	4.3	0.5	0.1	0.1	1.7

6.4 Household assets

The ownership of assets is an important indicator of social welfare and living standards, and therefore households that own certain assets have higher standards of living than those without. The Census collected data on a wide range of assets including cars, televisions, radios and mobile phones.

Table 6.6 provides information on households' ownership of communication assets. The results show radio and mobile phone were the commonly owned assets in //Karas Region, owned by 74.0 and 72.1 percent respectively, of all the households. More urban households owned radios (80.2%) than rural ones (66.7%). Only 5.8 percent of all households had internet connectivity and the majority of them were in urban areas.

Table 6.6 Percentage distribution of households owning selected communication assets by area

Area	Households	Radio	Television	Telephone (Fixed)	Telephone (Mobile)	Computer/Laptop	Home Internet Connectivity
//Karas	20 988	74.0	53.7	15.2	72.1	17.2	5.8
Urban	11 347	80.2	68.1	19.4	77.6	22.2	6.6

Oranjemund	3 381	79.1	69.9	21.0	76.6	34.0	13.2

6.5 Language

Information on the main language spoken in the household was collected from all households.

The results from Table 6.7 show that the Afrikaans language was reported in 36.1 percent of all households. Asian languages were spoken in only 18 (0.1%) of all households.

Table 6.7 Distribution of households by main language spoken

Main Language Spoken	Households	Percent

6.6 Agricultural Activity

Agriculture is defined in the Population and Housing Census as any activity directly related to the production or processing of crops, dairy products, poultry or livestock for commercial sale or as a principal means of personal subsistence. This is known as 'own-account' agriculture. Information was collected on the type of agricultural activities in which households engaged during the 12 months prior to the Census. Where applicable, households could report more than one type of agricultural activity.

The results in Table 6.8 show that livestock farming was most common in //Karas Region and was reported in about 12 percent of the households, while the least common agricultural activity was poultry farming (1.4%). Overall, livestock farming dominated in all constituencies of the region. Berseba constituency had more households (45.5%) engaged in livestock farming more than other constituencies.

Table 6.8 Percent distribution of households engaged in own account agricultural activity by area

Area	Households	Own account agricultural activity			
		Livestock	Crop	Poultry	Others
//Karas	20 988	12.2	2.4	1.4	0.6
Urban	11 347	4.5	1.6	0.5	0.5

Oranjemund	3 381	3.0	2.8	0.2	0.4

CHAPTER 7: HOUSING CHARACTERISTICS

This chapter presents analyses of the characteristics of housing, which include all structures used as dwelling units. Aspects considered are the type of housing, tenure, materials used for building, housing utilities, sources of energy and water supply sanitation.

46.8% of all households in the Karas Region reside in detached houses

7.1 Type of housing

Nine types of housing units were defined in the Census: detached house, semi-detached/townhouse, apartment/ flat, guest flat, part commercial/industrial, mobile home (caravan, tent), single quarters, traditional dwelling and improvised housing unit (shack).

Table 7.1 indicates that detached houses were the most common type of housing, making up 46.8 percent of all the housing types in //Karas Region. Improvised housing units made up 32.3 percent of the households in rural areas and 20.6 percent of all households in urban areas.

The Table shows that at the constituency level, detached houses were more common in urban than in rural areas. It is worth noting however, that of the 32.3 percent of improvised housing units/shacks in rural areas, a greater proportion were found in Berseba constituency (49.3%). The Table further shows that traditional dwellings were more common in Karasburg (20.8%) than in other constituencies.

Table 7.1 Percent distribution of households by type of housing unit and area

Area	Households	Detached House	Semi-Detached House	Apartment/ Flat	Single Quarters	Traditional Dwelling	Improvised Housing Unit (Shack)	Other Housing unit
//Karas	20 988	46.8	8.7	7.6	3.2	5.0	26.0	2.7

Oranjemund	3 381	37.4	10.2	20.6	8.0	0.1	18.0	5.7

7.2 Type of Tenure

Tenure refers to the conditions which govern the rights of individuals to occupy dwelling units. The most frequent forms are tenancy (in which rent is paid to a landlord) and owner occupancy which can be subdivided into owner-occupied or mortgaged. In the case of tenancy, the landlord can be a private individual, non-profit organization such as a housing association, or a government body which provides public housing.

Table 7.2 shows that most housing units in the region were owned and occupied without mortgage (35.8%). These were more common in rural (41.5%) than in urban (31.0%) areas. Housing units occupied by owners with mortgages were mainly found in urban areas (17.2%), and less so in rural areas (8.5%).

Table 7.2 Percent distribution of households by type of tenure status area

Area	Households	Owner Occupied With Mortgage	Owner Occupied Without Mortgage	Rented (Local Authority)	Rented (Private Firm)	Rented work related	Rented (Individual)	Occupied Rent Free	Others
//Karas	20 988	13.2	35.8	5.1	7.0	6.1	7.3	24.7	0.8

7.3 Average number of persons per bedroom

The Census collected information on the number of bedrooms per household and the average number of people per bedroom (or room occupancy). These figures serve as an indication of crowding.

Table 7.3 shows that on average, the number of persons per sleeping room in //Karas Region was 1.4, which suggests that most households were not overcrowded. There were no major differences between urban and rural areas in this respect.

Table 7.3 Average number of persons per room by area

Area	Households Population	Number of sleeping rooms	Average persons per room
//Karas	74 766	52 528	1.4

7.4 Materials used for housing construction

This section provides information on the materials used to construct roofs, walls and floors, which are important indicators of the socio-economic conditions and welfare of households. Most of the materials used can be broadly divided between those that are harvested with labour from local resources (grass, stick, mud and dung, etc.) and those that are purchased with cash (e.g. cement bricks or blocks and corrugated iron).

Table 7.4 shows that 56.9 percent of households reside in dwellings with walls made from cement blocks/bricks. About 67 percent of urban households use cement blocks/bricks for outer walls compared to about 45 percent for rural households. There was also a high proportion of rural and urban households that used corrugated iron/zinc for walls (31.6% and 24.5%, respectively).

At the constituency level, households with walls constructed from cement blocks/bricks/stones were predominant in Keetmanshoop Urban and Keetmanshoop Rural, both with close to 75 percent of households constructed with this material. On the other hand, wood/poles/stick /grass walls were more common in Karasburg (21.8%) than other constituencies, while walls made from tin were more common in Luderitz than in any other constituency.

56.9 percent of households reside in dwellings with walls made from cement blocks/bricks.

Table 7.4 Percent distribution of households by main material used for outer walls and area

Area	Households	Cement Blocks/Brick	Burnt Bricks/Face Bricks	Mud/ Clay Bricks	Corrugated Iron/Zinc	Prefabricated Materials	Wood Poles/Sticks or Grass/Reeds	Sticks with Mud/Clay/ Cow Dung	Tin	Other

Table 7.5 shows that corrugated iron sheets were by far the main material used for roofing, covering 77.7 percent of households in //Karas Region. The same trend was observed for urban, rural and constituency level with the exception of Luderitz and Oranjemund constituencies, which recorded that, in addition to corrugated iron sheets, over 31 percent of households used asbestos sheets as roofing material.

Table 7.5 Percent distribution of households by main material used for the roof and area

Area	Households	Corrugated Iron Sheet	Asbestos Sheet	Brick Tiles	Concrete	Thatch Grass	Slate	Wood Covered with melthoid	Sticks with Mud/Cow Dung	Tin	Others

With regard to material used for the floor, Table 7.6 shows that about 53 percent of all the households in //Karas Region had floors made from cement. Similar trends were observed in rural and urban areas. It can be noted that about 22 percent of the households in the region had floors covered with tiles/ceramic/wood/plastic and these were more common in urban areas than in rural areas.

Table 7.6 Percent distribution of households by main material used for the floor and by area

The main source of energy for cooking was electricity from mains, with 42.1% of households using this energy source

7.5 Sources of energy

Data collected from private households on energy for cooking and lighting provides useful information on social conditions and development. This information is also valuable as a measure of Namibia's use of renewable (e.g. solar and wind power) and non-renewable (e.g. oil and coal) resources, and the environmental consequences of using different kinds of energy.

Table 7.7 indicates that about 42 percent of households in //Karas Region relied on Electricity from mains as the main source of energy for cooking and 29.2 percent of households relied on gas. More than half (51.1%) of urban households relied on electricity for cooking while 51.5 percent of households in rural areas use wood to cook. However, only 7.4 percent of households in urban areas used wood for cooking. At constituency level, the majority of households in Berseba, Karasburg and Keetmanshoop Rural used wood as the main source of energy for cooking; Keetmanshoop Urban and Oranjemund used electricity (from Mains) as the main source of energy, and most household in Lüderitz used gas as the main energy source for cooking.

Table 7.7 Percentage distribution of households by main source of energy for cooking

Area	Households	Electricity from Mains	Electricity from Generator	Gas	Paraffin/Kerosene	Wood/Charcoal from Wood	Charcoal-coal	Others
//Karas	20 988	42.1	0.1	29.2	0.4	27.7	0.3	0.3

With respect to the sources of energy for lighting, the results from table 7.8 show that the most common source of energy for lighting in //Karas Region was electricity from the main grid, with 67.2 percent of the households using this type of energy. Around 83 percent of the households in urban areas relied on electricity from mains, while about 33 percent of households in rural areas relied on candles for lighting. Solar energy was not widely used, but played a more important role in rural areas (5.1%) than in urban areas (0.2%). Electricity from mains for lighting dominated in Oranjemund (95.3%), while Karasburg constituency relied more on candles for lighting than other constituencies.

The most common source of energy for lighting in the region was Electricity from Mains with 67.2 percent

Table 7.8 Percentage distribution of households by main source of energy for lighting and area

Almost all urban households had access to safe water (98.4%) in the form of piped water

7.6 Water Supply and Sanitation

This section covers the main source of water for drinking and cooking, the types of toilet facilities, and disposal of waste or garbage for households. Poor sanitation and inadequate access to safe water are public health concerns because they create conditions conducive to the spread of diseases.

The results from Table 7.9 show that 92.4 percent of the households in //Karas Region, had access to safe water. The results further show that about 98.4 percent of the households in urban areas had access to safe water compared to 85.2 percent in rural areas. With regards to unsafe water, only 3.4 percent of households in rural areas relied on boreholes with open tanks and other unprotected sources as their main source of water for cooking/drinking.

At constituency level, it was observed that 4.9 percent of the households in Berseba relied on unsafe water from boreholes with open tanks and other unprotected sources.

Table 7.9 Percentage distribution of households by main source of water for cooking/drinking and area

Area	Households	Piped Water Inside	Piped Water Outside	Public Pipe	Borehole		Well Protected	Safe water	Other unprotected sources

23.3 % of households in the //Karas Region had no toilet facility

With respect to the type of the main toilet facility, the results from Table 7.10 show that about 23 percent of households in //Karas Region had no toilet facility and only 64.2 percent had access to a flush toilet. There were notable differences between urban and rural areas. In urban areas 86.7 percent of the households used flush toilets while the rural percentage was only 37.9 percent. A similar occurrence of not many toilet facilities was observed in Berseba and Karasburg with over 47 percent of the households not having toilet facilities. It can be noted that 10 percent of households in Keetmanshoop Rural used a bucket as the main source of toilet facility.

Table 7.10 Percent distribution of households by type of main toilet facility

Area	Households	Private Flush Connected to Sewer	Shared Flush Connected to Sewer	Private Flush Connected to Septic/Cesspool	Shared Flush Connected to Septic/Cesspool	Pit Latrine with Ventilation Pipe	Covered Pit Latrine without Ventilation Pipe	Uncovered Pit Latrine without Ventilation Pipe	Bucket Toilet	No Toilet Facility	Others

7.7 Garbage and waste disposal

Table 7.11 shows that the most common means of disposing garbage in //Karas Region was regular collection (63.2%). Burning accounted for 19.2 percent of the households. In urban areas, 88.9 percent of the households benefit from regular waste collection. In rural areas, however, only 32.9 percent of households rely on regular collection, and 41 percent burn their refuse as a means of waste disposal. 11.6 percent of households in rural areas dump their waste on the roadside.

At constituency level, regular waste collection was most common in the Oranjemund (81.5%) and Lüderitz (77.4%) constituencies, as the rest of the constituencies depended on either burning or roadside dumping as means of disposing of their household waste/garbage.

Table 7.11 Percentage distribution of households by means of waste/garbage disposal and area

Annexure

Glossary of Census terms

The concepts and classifications used in the 2011 Population and Housing Census are defined below. These concepts and classifications are based on regional and International recommendation with adaptations to suit local conditions.

Geographic Concepts

//Karas Region consisted of 6 constituencies, namely Berseba, Karasburg, Keetmanshoop Rural, Keetmanshoop Urban, Lüderitz and Oranjemund.

Locality

For the purpose of the Census, a locality is defined as a distinct population cluster, irrespective of size, in which people live and which has a name or locally recognized status.

Enumeration area

For the purpose of enumeration (census data collection/counting), the whole country was divided into small geographical areas of manageable sizes known as enumeration areas (EAs).

Dwelling unit

A dwelling unit is a unit of accommodation of a household that may be vacant or shared by more than one household.

Marital status

Is defined as the person's personal status in relation to the marriage laws or customs of the country

Live birth

A child born alive is one who cries after being born. Thus, a live birth is a birth which results in a child that shows any sign of life irrespective of the time or period within which these signs are manifested.

Early childhood development

This refers to children aged 0 - 4 years who were attending day-care, crèche, kindergarten and pre-primary school. The categories were as follows: Edu-care (day-care, crèche, kindergarten) and pre-primary school.

Literacy

This refers to the ability to read and write with understanding in any language. Those that could both read and write with understanding were classified as literate; and those who could only read but not write were classified as illiterate.

School attendance

This refers to full time attendance at any regular educational institution, public or private, for systematic instruction at any level of education.

Educational attainment

The highest standard, grade or years completed at the highest level of school, college or university attended.

Disability

This refers to a condition of loss of physical or mental function resulting in inability to perform daily activities. Disability is aggravated by physical, personal, and environmental barriers.

Occupation

This refers to the type of work, trade or profession performed by an individual during the Census reference period, irrespective of status in employment of the individual.

Industry

This refers to the main goods and/or services produced at the person's work place (if employed) or usual place of work (if on vacation, sick leave).

Employment status

This refers to the status of those employed during the reference period or those who were on sick/vacation leave and had a job to return to, in terms of either working/worked as employees, employers, own account workers, or unpaid family workers.

Household

A household consists of a person or a group of persons related or unrelated who lived together in the same homestead/compound but not necessarily in the same dwelling unit.

Head of household

The head of household is the person (of either sex) who is looked upon by the other members of the household as their leader or main decision-maker.

Children and orphan headed household

This refers to households headed by children/orphans aged 18 years and below. Orphans are children 18 years and below who during the time of the Census were orphaned by one or both parents.

Household assets

Ownership of assets is a good measure of the social well-fare and standard of living of households. Hence, households were also asked whether they owned certain assets, and the assets had to be in working condition. Assets included: car, motorbike, bicycle, radio, television, telephone (landline), telephone (mobile), computer/laptop, refrigerator/freezer, stove, microwave, etc.

Agricultural activities

This refers to activities such as the farming of crop, poultry, or livestock, agro processing and horticulture.

Housing unit

This refers to separate and independent living premises occupied by the household.

Tenure

This is the arrangement under which the household occupies all/or part of a housing unit. This looks at whether the housing unit was owner-occupied, rented or rent-free.

Number of sleeping rooms

These are all rooms used for sleeping purposes only, thus it excludes rooms such as study rooms, toilets, kitchens, passages etc. However if a room such as a garage was used for sleeping purposes it was considered a sleeping room.

Material used for outer-walls, floor and roof

This refers to the main material used for the construction of the household's housing unit. Materials may include cement blocks/bricks/stones, burnt/face bricks for outer-walls, or corrugated iron-sheets, brick tiles, concrete for roof, or sand/earth, cement, mud/clay for floor, etc.

Source of water for cooking and drinking

A measure of the well-being of Namibians is the proportion of households that have access to clean/potable water. This question referred to the main sources of water used by the households for cooking and drinking.

Source of energy for cooking, lighting and heating

This refers to the type of energy most often used for cooking, lighting and heating. The sources include electricity, gas, solar, wood, candle, charcoal, paraffin, etc.

Type of toilet facility

This information provides a measure of sanitation level of the household since these facilities are important for disease control and health improvement. This looked at whether the household used a private toilet connected to the main sewer, public toilet connected to the sewer, private toilet connected to septic tank, public toilet connected to septic, etc.

Garbage and refuse disposal

This information can be used in obtaining the hygiene level of the household since these facilities are important for disease control and health improvements.
